Steady: what changed

Easier to use

- **Speak button first.** One big "Speak" button. Typing is still there, just smaller.
- **Hindi.** English / Hindi toggle at the top. Voice listens in Indian English or Hindi.
- **Simpler Home.** Home shows only your buttons and the "right now" area. Everything else moved to a new **Settings** tab.
- **Text size.** A- / A+ buttons at the top, four sizes, and everything scales.
- **Bigger buttons.** Every button is at least 56px tall.
- **High contrast.** A half-circle button at the top. The "right now" box has a thicker border.
- **Plain words.** "Record" is now "What changed". "Install fix" is now "Update my phone". "Rule" wording is gone.
- **Your own names.** Change "Mom" and "Alex" in Settings.

Safer

- **Medicine reminder asks Morning or Evening** (no more guessing AM/PM). It repeats daily and has a "Mark as taken" button.
- **"Forget everything" asks first.**

Easier to hear and read

- **Listen buttons** read replies and family notes aloud.
- **Messages stay 10 seconds** (before: under 3) and can be tapped away.
- Replies on Home are now visible after you approve something.
- The screen keeps its scroll spot and focus when it updates.
- "Keep it" is now two big buttons: **Keep always** / **Keep on one day**.

Family phone (new)

- **1.** Parent: Settings, then "Make a family code".
- **2.** Child: open the same page, switch to Helper, type the code.
- **3.** Child sends a button name and optional note.
- **4.** Parent taps Yes and it becomes a button. Pressing it shows the note in big text.
- Optional: "Add family buttons without asking me" (off by default).
- Needs the published Claude link and a signed-in child. It does not work from the files on your computer.

Code

- Split into **index.html**, **style.css**, **app.js**.
- **replay-tour.js** now reads app.js. All 18 tour steps still pass.

Not done yet

- Full Hindi for every reply, scam checker, real calling/WhatsApp, first-screen language picker, testing with real users.
